

Concussion/Head Injury Management Plan Example:

WIAA and NFHS Suggested Concussion Management

1. Any athlete suspected of having a concussion should immediately be removed from participation.
“When in doubt, hold them out.”
2. No athlete should return to play (RTP) or practice on the same day of a concussion.
3. Any athlete with a suspected concussion must be evaluated and medically cleared by an appropriate health-care professional prior to resuming participation in any practice or competition.
4. Athletes should not be allowed to RTP while still having symptoms.
5. After medical clearance, athletes should follow an individualized, stepwise RTP protocol. In order to resume activity, the athlete must be symptom free and off any pain control or headache medications, carrying a full academic load without any significant accommodations, and have clearance from an appropriate health care provider.

The program described below is a guideline for returning concussed athletes when they are symptom free. Athletes with multiple concussions and athletes with prolonged symptoms often require a very different return to activity program and should be managed by a health care professional with experience in treating concussion. The following program allows for no more than one step per 24 hours. The program allows for a gradual increase in heart rate/physical exertion, coordination, and then allows contact. If symptoms return, the athlete should stop activity and notify their healthcare provider before progressing to the next level.

STEP ONE: About 15 minutes of light exercise: stationary biking or jogging

STEP TWO: More strenuous running and sprinting in the gym or field without equipment

STEP THREE: Begin non-contact drills in full uniform. May also resume weight lifting

STEP FOUR: Full practice with contact

STEP FIVE: Full game clearance
